## DETAILED ACTION

### *Drawings*

All figures showing a cross-sectional view are improperly crosshatched. All of the cross hatching patterns should be selected from those shown on page 600-81 of the MPEP based on the material of the part. Also see 35 CFR 184 (h)(3) and MPEP 608.02.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Bayan et al. (US 6348726).

A lead frame (Figs. 4,7a,7b), comprising:

A frame body (surrounds 205, connects through 264) of a conductive material and including at least one opening (not labeled, see openings between pads) for mounting a chip;

A die pad placed 205 in the opening of the frame body; and a group of leads 209 extending from the frame body into the opening, the group of leads including at least:

A first lead connected to the frame body (through 264) and including a first bonding pad 226 provided on an upper surface of the first lead and a first land (See fig. 4, back surfaces of 209) on a lower surface of the first lead; a second lead connected to the frame body and including a second bonding pad 224 provided on an upper surface of the second lead and a second land on a lower surface of the second lead; and a third lead connected to the first lead and including a third bonding pad 227 provided on an upper surface of the third lead and a third land on a lower surface of the third lead, wherein a connecting portion (213,214) that is thinner than the lead frame body and that can be punched through is provided between the first and third leads.

Bayan et al. also discloses a lead frame wherein:

- At least the second lead includes a neck portion (see connecting portions between pads) with smaller width than other portions as viewed in a plan view
- Each lead includes a region around the bonding pad with smaller thickness than that of the lead portion corresponding to the bonding pad, with a stepped portion (see indentations in lead shown in Fig. 4)
- First second and third leads are coplanar on a common plane while being arranged in three rows on the common plane
- The second lead and a lead structure including the first and third lead are arranged alternately along a periphery of the opening of the frame body

- A single metal plate from which the group of leads, frame body and die pad are made of
